

Applications covered by Purewater Storage include:

Potable (drinking) water storage tanks, in one piece, two piece and sectional formats.

Bespoke configuration potable water storage tanks, available on one and two piece formats, ideal for applications where access or available footprint are an issue. Provide us with the available space dimensions and we can manufacture a tank for you.

Process cooling tanks for industrial process cooling applications, suitable for solutions at a working temperature of -15c.

Above ground combination units incorporating the water storage tank *and* a dry compartment into which a booster set can be positioned, all within one unit. The pump set compartment is accessed via a hinged and lockable door.

Subterranean combination units providing water storage *and* a sealed compartment into which a booster pump set can be positioned. Accessed via a turret and std steel manhole in the ground. Allows the provision of stored water and booster set, all hidden below ground.

GRP enclosures to suit all applications including tank enclosures, pump set covers and kiosks, available with a range of integral accessories including lighting, frost protection, consumer units and vents.

A vast range of tank accessories including float valves, overflows, outlets, level monitoring & level control equipment, tank foundations & support frames, ladders, drip trays and more.

LATEST ADDITION - tank upgrade equipment, specifically for mechanical contractors, facilities services and water hygiene service providers. Do you need insulated GRP lids and screen units to upgrading existing tanks? We have a page dedicated to exactly the type of products for you, please take a look.

Turnkey tank replacement services includes site survey, removal of existing tanks and installation of replacement tanks carried out by our own directly employed engineers who work throughout the UK on a daily basis.
