

# Grp Underground Water Storage Tanks

purewater.  
storage ltd

Grp cylindrical tanks suitable for positioning underground with a concrete or granular backfill.

Manufactured from high quality Grp materials.

Suitable for a variety of applications including:

- Potable water storage
- Rainwater harvesting systems
- Stormwater and drainage systems
- Fire fighting systems

A vast storage capacity range from 1000 litres up to and including 240,000 litres is available.

## Ancillary Items include:

- Inlet connections
- Overflow connections
- Outlet connections
- Internal ladders
- Extended ladders
- Level control switches
- Solenoid operated inlet systems
- Internal division plate to provide 2 compartments
- Internal Baffles and weir plates

Due to the large variety of applications the precise specification, connection detail, access turrets and other ancillary items vary from project to project.
