

“Boost-A-Break®” - Break Tank & Booster Sets

Model BTAB® – Variable Speed Overview – Datasheet Page 1 of 5

Overview

Break Tank assembly with Fluid Category 5 protection by virtue of the integral Type AB air gap. The unit is supplied as a complete package on a stainless base ready for installation.

The primary purpose is to provide backflow protection in accordance with the latest Water Regulations. The BTAB unit also boosts the water pressure for elevated areas or where a high flow rate is required – e.g. wash-down.

The cistern has a screened overflow and weir, making it suitable for unorthodox applications, which require a “Hygienic Type AB air gap” – e.g. butchery and vegetable preparation.

The unit is quiet by virtue of a centrifugal pump, anti-vibration rubber feet and flexible stainless braided connection hoses. The variable speed range has the compactness of the fixed speed range plus additional benefits.

For higher flow rates see Dual Pump Datasheet.

For domestic boosting use “Pent-A-Boost” model BTAF.

Applications

The following are Fluid Category 5 examples see Water Regulations (Table 6.1e) -

- Waste bin washing
- Hose union taps – non-domestic
- Wash-down – animals or any Fluid Category 5
- Underground or surface irrigation – *see HUBG*
- Laboratories
- Baths in health care premises
- Showers health care – *see Care Shower*
- Sinks with hoses
- Bidets
- Bedpan washing
- Vegetable washing
- Butchery & meat equipment / Slaughterhouse
- Clothes washing machines – healthcare premises
- Dish washing machines – healthcare premises
- Applications deemed to be Category 5 by water company

Water Regulations

The assembly is fully Water Regulations approved & complies with the requirements of the Water Regulations when installed and used correctly. A Break Tank with a Type AB air gap provides protection against Fluid Category 5 risks - these risks are the highest level. “Boost-A-Break®” can therefore be used for all applications requiring backflow protection – use “Pent-A-Boost” for drinking water.

The Regulations require point of use protection. For example, it is not permissible to use the same Break Tank to serve a bedpan washer (Fluid Category 5) and a dishwasher. However several appliances of the same type can be served from the same Break Tank unit – e.g. irrigation network.

“Boost-A-Break®” – Break Tank & Booster Set

Model BTAB® – Variable Speed 1.0 Lt/s - Datasheet Page 2 of 5

Description – Variable Speed (1.0 Lt/s)

Variable speed pumps provide only the pressure required to meet demand making the unit economical and extending the life of the pump.

There is a choice of 9 variable speed pumps with a 1.0 Lt/s output – see chart below.

The variable speed range has all the benefits of the fixed speed pumps plus -

- Higher flow rate – up to 2.0 Lt/s output
- Variable speed – speed changes to meet demand
- Quiet – especially at low demand
- Surge free – inverter pump avoids high current demand
- Constant supply pressure
- Electronically controlled automatic pump venting system

Inlet Control

Fast and accurate level control is achieved with solenoid valve(s). Level electrodes provide on/off full flow control with 60 mm delayed action.

Model	Inlet Size	Minimum Dynamic Pressure	Pipe Velocity m/s
3-5, 3-7	DN20 female union	1.0 bar	3.7
3-10, 1-5, 1-6, 1-7, 1-8, 1-9, 1-10	DN25 female union	1.0 bar	2.8

Outlet Pressure Control

The outlet pressure is controlled by a transducer, which is factory set to the “default set point” in the table below and controlled to within a 10% band. The outlet pressure is therefore constant up to the maximum duty of the pump.

Model	Outlet Size	Default Set point	Pressure Switch on (min.) ¹	Pressure Switch off (Max) ¹	Pressure Max ²	Vessel Air Pressure ³
3-5	DN20	2.0 bar	1.8 bar	2.2 bar	2.8 bar	1.4 bar
3-7	DN20	3.0 bar	2.7 bar	3.3 bar	4.6 bar	2.1 bar
3-10	DN25	4.0 bar	3.6 bar	4.4 bar	5.5 bar	2.8 bar
1-5	DN25	5.0 bar	4.5 bar	5.5 bar	7.0 bar	3.5 bar
1-6	DN25	6.0 bar	5.4 bar	6.6 bar	7.0 bar	4.2 bar
1-7	DN25	7.0 bar	6.3 bar	7.7 bar	11.7 bar	4.9 bar
1-8	DN25	8.0 bar	7.2 bar	8.8 bar	11.7 bar	5.6 bar
1-9	DN25	9.0 bar	8.1 bar	9.9 bar	11.7 bar	6.3 bar
1-10	DN25	10.0 bar	9.0 bar	11.0 bar	11.7 bar	7.0 bar

Notes -
1. Differential +/- 10% of set point. 2. If set to full speed.
3. Vessel air pressure with zero water pressure, 0.7 X set point.

The graph below illustrates the benefit of variable speed pumps. The outlet pressure is constant despite varying flow demand. Illustrated using “default set point”. The set point can be altered at the factory. On-site alterations require a commissioning service.

“Boost-A-Break®” - Break Tank & Booster Set

Model BTAB® – Options (Continued) – Datasheet Page 5 of 5

BTCAB2 Dimensions

BTCAB1 – GRP Heated Enclosure with Kiosk Door, for external use of the Boost-A-Break® unit. The housing has an integrated bar heater, complete with thermostat. The exterior colour of the enclosure is RAL6005.

Dimensions

GRP Drip Tray

BTDT1 – GRP Drip Tray for use with Boost-A-Break® units (up to the BTAB3-7S), where it is impractical to fit an overflow.

BTDT2 – Additional isolating solenoid.

The whole pump set sits on top so any water leaking from the tank or pump is captured in the “moat” and runs into the well, activating the float switch and isolating the water supply, which stops the pump. The pump restarts once water is drained from the well.
