

Float valve housings to suit retro - fitting

Retro-fit Raised float valve housings

- Heavy duty Grp construction - robust and lightweight.
- Supplied with screened spill over weir providing AB air gap arrangement or AA air gap when mesh screen omitted.
- Suitable for fitting to existing tanks and tank lids to provide an AB/AA air gap where Cat 5 water is present within the system. Can also be used to increase the actual storage capacity of an existing tank.
- An external fixing flange allows the float valve housing to be bolted down to the existing lid.
- Full range available to suit various sizes and types of float valve.
- Suitable for existing tanks manufactured from Grp, pressed steel, profile welded steel and most other materials.
- A cost effective method of adding a raised float valve-housing without replacement of the tank lid.
- Full size replacement tank lids are also available, please telephone or take a look at our website.

Fixing flanges are supplied un-drilled

Fixings & sealant to suit fixing to the existing tank are not included.

Current water regulations require a screened vent to be fitted to the lid of the tank, please see our comprehensive range of screened vents and overflows for these items.

Part No.	A	B	C	Float Valve Suitability
FVH3 FL	700mm	830mm	335mm	Equilibrium: 15-35mm Aylesbury: 20-50mm (KAX) 20-42mm (KB)
