

Steel support frames

- Steel support frames suitable for raising the tank, allowing pump sets or other equipment to be positioned underneath.
- A standard range of support frames is available to suit all Purewater tanks.
- Allows maximum use of the available footprint.
- Each frame has a removable lower brace to allow positioning of equipment.
- Increases the static head for applications where pressurised feed to equipment is advantageous.
- Suitable for One piece and two piece tanks and some sectional tanks.
- Available in galvanized, powder coated or painted finish.
- Can be manufactured in one piece or in bolt up sections allowing easy access and assembly on site.
- Supplied with ply base board to provide a flat solid surface for the base of the tank.

To enable us to assist with your requirements please contact us providing the following information:

- Tank model number or tank size for which the frame is required.
- Internal height of the building in which the unit is to be positioned.
- Required clearance needed to the underside of the frame.
- Details of any access restrictions to enable positioning of frame and tank.
- Preferred finish.
